

WATER BORE CONSTRUCTION SEALING PACKER

RIPE's Sealing Packers are manufactured in a variety of types and sizes,. They can be flared or with a J-latch or lagged on pipe to the length required the choice is yours! Weld prepped for easy connection to well/bore screens or pipe extensions. Multiple rubber ribs form a seal between the casing and the well screen. The rubber is fully vulcanized to the pipe casing then precision machined to the correct diameter for sealing requirements.

The fully vulcanized rubber and the multi ribbing provides a vast improvement on the age old problem of sealing, that the old K-Rubber once had. RIPE's Sealing Packers are also up to the task of joining borehole casings of differing diameters to water well screens, making them the perfect aid.

RIPE Packers also manufacture water well telescopic Sealing Packers to suit transition joints of different diameters. Great for the repair of weld joints using different diameters, steel, PVC and fibreglass repairs. Telescopic back seals work best where two different diameters need to meet.

All diameters and sizes are manufactured upon request, to minimize loss of diameter.
