

RUBBER ROLLER REPAIRS

For Agricultural Machinery

Do you have worn rubber coated machinery rollers that need replacing? Most of the time the metal component of the roller is still in perfect condition. So why put dollars down the drain and replace the whole roller new, when all that is need is for the rubber to be repaired?

BEFORE..

AFTER!!

- COST EFFECTIVE - FAST TURN AROUND - SMALL TO LARGE DIAMETERS -

RIPE have been servicing the materials handling roller market for over 15 years, from our workshop in Belmont, WA. We have experience repairing worn draper rollers, drive rollers, front rollers, hay rollers, egg rollers the list goes... on we can do the lot!

RIPE will quickly and efficiently repair rubber rollers ensuring minimal machine downtime. The roller is first stripped of worn rubber, sandblasted, chemically primed, lagged with new uncured rubber, auto-clave cured (vulcanised) and, finally, grinding completes the process.

In addition to the option of recovering the rubber component of the roller, RIPE can also manufacture roller mandrels/cores, rebuild damaged shafts and housings, provide bearings and even manufacture a complete new roller replacement.

For further information or a quote, please call John or send through an email with photos of the rollers in need of repair!
